The diversity of habitats found in and each of the River to Ridgetop Preserves resulted from the glacial ice sheet that deposited large amounts of sand and gravel before retreating 17,000 years ago. The rock-free soils became important farmland, remnants of which can be seen in the abandoned fields running along the valley (Red, Blue, and Orange Trails). The three bowl-shaped wetlands seen from the Blue Trail were formed when large chunks of glacial ice melted. These depressions, called kettle holes, fill with water creating vernal pools that nurture a variety of amphibians. As the Blue Trail rises, with the kettle holes on your right, you are walking on an esker, a buildup of sand and gravel. These deposits were formed by meltwaters flowing within the glacier. In upland areas, the soils deposited by the glacial river abruptly give way to soils formed by the action of the glacier as it ground its way over the hills, leaving a jumble of mineral soils ranging from fine-grained clays to large boulders (northern end of the Yellow Trail).

Today’s upland forests were mostly grazing lands through the 1800s. As fields reverted to woodlands, water availability was an important factor determining what tree species grew here. In lowlands, where water is most plentiful, ash, tulip, yellow birch and red maple are mixed in with red and white oak, American beech, hickories, black birch and sugar maple. In contrast, on south-facing drier ridge tops, the slope community gives way to a predominance of black, white and scrub oaks with some black birch and pignut hickory. In between, moisture and other conditions vary favoring different mixes of species. Pleasant Valley Preserve with its diversity of habitats and land forms is a superb example of the southern New England landscape and its farming history. It is a living record of Lyme’s past; look for similar woodland habitats in the other River to Ridgetop Preserves.

**Access**

The Pleasant Valley and Jewett Preserves may be accessed through a gate off Macintosh Rd, about 0.5 mile from the intersection of Rt 156 and Beavertook Rd. Parking is available at the gate, along Macintosh Rd or at the “Swimming Hole.” An information kiosk is located about 1/10 of a mile from the gate. The Jewett Preserve can also be accessed from two locations along the north side of Mt. Archer Rd between Macintosh and Tantumorantum Roads; parking is along Mt Archer Rd between Macintosh and Tantumorantum Roads; a small parking lot and kiosk are present here. The Eno Preserve can be accessed between Mac. Archer Rd from the Jewett Preserve “Cemetery” entrance. The access to Pickwick’s Preserve is from 183 Joshuawood Road, go about 0.4 mile up the driveway and park at the gate on the right.

**Report any problems during your visit on the Trail Condition Form:** www.lymelandtrust.org/trail-condition-form.

**HUNTING IS PROHIBITED:**

- At all times in Pleasant Valley Preserve and the area north of the stone wall in Mt. Archer Woods.
- In all preserves on Saturdays and Sundays.

**HUNTING IS ALLOWED:** (with written consent of owner)

- Monday–Friday during deer/firearm hunting season: (Preserves are closed to other users during these days)
- Monday–Thursday during spring turkey hunting season (dates posted)
- For more information on the Lyme Hunting Program, visit: www.lymelandtrust.org/stewardship/hunting-program
- The northern section of the Pleasant Valley Preserve Yellow Trail that crosses over the Cahanan property is closed to hikers during November and December.

For additional maps visit www.lymelandtrust.org.

**ACTIVITY GUIDELINES**

**Pickwick’s Preserve (LLCT)**

- Walking only
- No motorized bikes, pets, or motorized equipment

**Mt. Archer Woods & Eno Preserve (Town & LLCT)**

- Walking only
- Non-motorized biking and horseback riding are allowed on the White and Yellow Trails in Mt. Archer Woods, Eno Preserve and Jewett preserve; these activities are not allowed in the Pleasant Valley Preserve.

**Jewett Preserve (Town & TNC)**

- Walking and biking only
- Dogs must be on leash

**Pleasant Valley Preserve (Town & TNC)**

- Walking and biking only
- No hunting
- Dogs must be on leash

**RIVER TO RIDGETOP PRESERVES**

**Pleasant Valley Preserve**

**Jewett Preserve**

**Mt. Archer Woods Chauncey Eno Preserve & Pickwick’s Preserve**

---

These five contiguous preserves extend from river to ridge top and protect diverse site conditions that provide a rare diversity of habitats, including stream beds, fields, wetlands and several woodland types. The protected area includes more than a mile of high-quality tributaries of the Connecticut River, including parts of the Wild and Scenic Eightmile River, and spans more than 1200 acres—from the Pleasant Valley Preserve up through the Jewett Preserve to the ridge top in the Mt. Archer Woods and down the west facing slope in the Eno and Pickwick’s Preserves toward Joshua Creek. Most wildlife species require a number of habitat types for their survival and these preserves provide and protect these habitats and give us an opportunity to observe their natural functioning.
History
In 1992, Catherine and Elizabeth Fehrler, daughters of painter Oscar Fehrler, donated 235 acres to The Nature Conservancy (TNC) for the Pleasant Valley Preserve; it was named after the area made famous by Lyme impressionist painters. The Preserve, managed by Lyme Land Conservation Trust (LLCT), also includes a 105-acre conservation easement donated by Fritz and Aline Cahagane to TNC. The adjacent Jewett Preserve was created in October 2004 when the Town of Lyme and TNC bought 434 acres and conservation easements on another 46 acres for $32.7 million from Charley, Jennifer and Jonathan Jewett, the children of the late Molly and Chuck Jewett. Financial assistance was provided by private donors, and the State of Connecticut Open Space and Watershed Protection Program (OWSPP). Private buyers bought the 46 acres, with extensive conservation restrictions on 34 of them. Mr. Archer Woods is a 275-acre Town-owned property purchased in 2003 with private donations and funding from the Town of Lyme, the OWSPP and TNC. The 100-acre Chauncey Eno Preserve was purchased in 1998 by the LLCT and made possible by the generous contributions of two Lyme residents. In 2006, an anonymous donor purchased and donated an easement on the 18-acre Pickwick's Preserve, providing access to the trails from JoshuaTown Road, the preserve was named for the donor's Shetland sheepdog, an avid hiker of Lyme's woodlands.

Access
The Pleasant Valley and Jewett Preserves may be accessed through a gate off Macintosh Rd, about 0.1 mile from the intersection of Rt 156 and Beaverbrook Rd. Parking is available at the gate, along Macintosh Road or at the “Swimming Hole”. An intersection of Rt 156 and Beaverbrook Rd. Parking is available at the stone pillar about one mile from the entrance of Mr. Archer Rd and Rt 156 and 2/3 of a mile from the intersection of Brush Hill and Tanmorumantum Roads; a small parking lot and kiosk are present here. The Eno Preserve can also be accessed across Mr. Archer Rd from the Jewett Preserve “Cemetery” entrance. The access to Pickwick’s Preserve is from 183 JoshuaTown Road, go about 0.6 mile up the driveway and park at the gate on the right.

Pleasant Valley Preserve
The diversity of habitats found in and each of the River to Ridgetop Preserves resulted from the glacial ice sheet that deposited large amounts of sand and gravel before rereating 17,000 years ago. The rock-free soils became important farmland, remnants of which can be seen in the abandoned fields running along the valley (Red, Blue and Orange Trails). The three bowl-shaped wetlands seen from the Blue Trail were formed when large chunks of glacial ice melted. These depressions, called kettle holes, fill with water creating vernal pools that nurture a variety of amphibians. As the Blue Trail rises, with the kettle holes on your right, you are walking on an esker, a buildup of sand and gravel. These deposits were formed by meltwaters flowing within the glacier. In upland areas, the soils deposited by the glacial river abruptly give way to soils formed by the action of the glacier as it ground its way over the hills, leaving a jumble of mineral soils ranging from fine-grained clays to large boulders (north end of the Yellow Trail).

Today’s upland forests were mostly grazing lands through the 1800s. As fields reverted to woodlands, water availability was an important factor determining what tree species grew here. In lowlands, where water is most plentiful, asp, tulp, yellow birch and red maple are mixed in with red and white oak, American beech, Hickories, black birch and sugar maple. In contrast, on south-facing drier ridge tops, the slope community gives way to a predominance of black, white and scrub oaks with some black birch and pignus history. In between, moisture and other conditions vary favoring different mixes of species. Pleasant Valley Preserve with its diversity of habitats and land forms is a superb example of the southern New England landscape and its farming history. It is a living record of Lyme’s past, look for similar woodland habitats in the other River to Ridgetop Preserves.

Jewett Preserve
The White Trail connects to the Mt. Archer Woods/Eno White Trail to form a 3.6 mile loop. About 0.5 miles from the easternmost Mr. Archer Rd entrance, there is a nice overlook with a bench. Continuing another 0.4 mi, the Yellow Trail splits from the White Trail, goes through an interesting “spile rock” and runs for about 0.7 miles where it joins the Pleasant Valley Preserve trail system. This combination trail of White and Yellow was developed as part of an Eagle Scout Project led by Andre Yeomans. If you return to the start along Macintosh and Mt. Archer roads, you will have completed a 2.6 mile loop. The Yellow Trail connects the White Trail to the Pleasant Valley Preserve Yellow Trail. The Red Trail connects the White Trail (near the Cemetery Entrance) to the Pleasant Valley Preserve Yellow Trail (near the Overlook).

Mt. Archer Woods Chauncey Eno Preserve & Pickwick’s Preserve
The four trails on these properties, White, Yellow, Red and Blue, cover relatively flat terrain over one of the highest points in Lyme. Due to the perched water table, especially near the White Trail, the forest vegetation resembles that more characteristically associated with moist lowlands. Of note are several stands of large tulip poplar trees. Continuing south (and down slope) on the Yellow and Red Trails the vegetation is more typical of dry hilltops. At the southern end of the White Trail are stone runs that go back to the early 18th century: remnants of houses, barns, sheds, penning areas, and pasture stone walls. There is an additional foundation near the intersection of the Yellow and Red trails. These are significant archaeological sites that can yield important information about our colonial past.
